

Finally, there is a blood test for **early cancer detection** in dogs

“ *Early detection and treatment are the best ways to manage cancer in pets... cancer is frequently treatable and early diagnosis will aid your veterinarian in delivering the best care possible.*

- American Veterinary Medical Association

What is cancer screening?

Just like in people, cancer screening should be an important part of preventive care in dogs; the goal is to look for cancer when your pet is feeling well, before they start to show any clinical signs. During **wellness visits**, your veterinarian may look for early signs of cancer in your dog by performing a thorough physical exam and asking you about any concerning observations. Your veterinarian may also perform routine blood and imaging tests, and may recommend OncoK9 - a new blood test that could detect cancer before your dog shows any clinical signs.

What is OncoK9?

The OncoK9 liquid biopsy test uses a simple blood draw to detect abnormal DNA released into circulation by cancer cells.

SIMPLE BLOOD DRAW

Your veterinarian will collect a blood sample from your dog.

MULTI-CANCER COVERAGE

OncoK9 can detect **30 different types of cancer**, including eight of the most common cancers in dogs.

CUTTING-EDGE TECHNOLOGY

OncoK9 uses state-of-the-art **next-generation sequencing (NGS)** technology to detect changes in DNA that are indicative of cancer.

EARLY DETECTION

OncoK9 may help detect cancer early, **when your dog still looks healthy** and has the best chance of defeating the disease.

Lifetime Risk of Cancer:
1 in 3 Dogs

Cancer Is by Far the **#1 Cause of Death in Dogs**

Defeating cancer starts with knowing your dog has it

Is my dog a candidate for **cancer screening** using OncoK9?

Dogs Age 7 and Older

Older dogs are at higher risk of cancer, regardless of breed. Consider adding OncoK9 to their routine wellness exams.

9x Higher Risk of Cancer Over Age 7

Dogs Predisposed to Cancer

Some dogs are at higher risk of cancer due to their breed, and may benefit from cancer screening starting at an age younger than 7.

Higher Risk of Cancer at Younger Ages in Predisposed Breeds

Common Breeds

Predisposed to Cancer

Giant Breeds

Predisposed to Cancer

This list is derived by intersecting breeds known to be predisposed to cancer with breeds that are common in the United States; the list is not exhaustive, and other breeds may also have a high risk of cancer.
